

working with the kii three system

It is every sound engineer's dream to work in a studio with the best possible speaker system. Main monitors in legendary studios offer a quality that can't be reached by normal monitor systems that are common in home studios. The room dimensions destroy the clarity of audio signals and you will find yourself listening to the speakers rather than to your music.

With kii audio that barrier has been broken, because it outsmarts the room. This is an entirely new experience, as you never listened to this level of accuracy in a home environment. And now you can also rent the sound quality of a major studio at frequenzbereich, milchberg 13, 86150 augsburg. Please get in touch with us for a free taster session. You will immediately hear the difference.

If you feel you would require a final test session for your project before its launch, we charge the following for working with the kii three system:

3 hours: 50 €

8 hours: 100 €
